## Coding & Solution Template

Implementation summary, source repository details, and instructions.

### Solution Overview

| Field                 | Details                                                                        |
|-----------------------|--------------------------------------------------------------------------------|
| Workspace Location    | SmartLender/5.Project Development Phase                                        |
| Programming Languages | Python 3.13, HTML5, CSS3                                                       |
| Frameworks Used       | Flask, Scikit-learn (Random Forest), Pandas, NumPy, Joblib                     |
| Key Features          | Real-time loan prediction, StandardScaler scaling, dynamically resolved paths. |

### Run & Setup Instructions

1. Open a terminal and navigate to the project directory: `cd "SmartLender/5.Project Development Phase"`.
2. Install required dependencies: `pip install -r requirements.txt`.
3. Launch the application: `python app.py`.
4. Open your browser and navigate to `http://127.0.0.1:5000`.
5. Access **Predict**, enter applicant metrics, and click **Submit** to check loan eligibility
